Last update: November 4, 2026

Current CV: https://raffa-p.github.io/cv

Computer Engineering undergraduate at the University of Pisa, interested in software engineering, mobile and web development, database design and computer networks. Through university and personal projects, I have gained hands-on experience in building applications, designing data models and working with modern development tools and frameworks.

Education

2021 – Present
Pisa, Italy

Bachelor's Degree in Computer Engineering

University of Pisa

Degree in progress. **Expected graduation: Q1 2027 (January–March 2027).**

2016 – 2021
La Spezia, Italy

High School Diploma – Scientific Studies

Istituto di Istruzione Superiore "G. Capellini - N. Sauro"

Scientific-track high school diploma, completed with top grade.

Projects

Fitness tracking iOS application

GymPlus

Developed a fitness logbook app combining workout tracking, nutrition monitoring and an athlete community, with an experience tailored to iPhone, iPad and Apple Watch.

`iOS` `Workout Tracking` `Nutrition` `Community`

Interval training mobile application

FisioTimer

Developed a customizable interval-training timer with configurable workout, rest and recovery phases, sets and cycles, plus multilingual voice guidance to follow each training session.

React Vite Capacitor Mobile Development

iOS application

CINEMAX

Developed an iOS app to discover and track movies and TV series, manage watchlists and record viewing progress. Integrates the TMDB API and uses Supabase for authentication and cloud data synchronization.

Swift SwiftUI Supabase TMDB API

Personal finance application

MoneyMind

Developed a client–server application for personal finance management using Java 21 and the Spring Boot framework.

Java 21 Spring Boot Client–server

University web development project

Gymplus (University Project)

Built a website for managing gym training sessions and connecting athletes with personal trainers.

HTML CSS JavaScript

University software engineering project

Laureandosi2

Contributed to a web application developed for a Software Engineering course, using PHP, WordPress, MySQL and nginx, with PDF generation and email libraries.

PHP WordPress MySQL nginx Software Engineering

Database design project

SmartBuildings

Designed a MySQL relational database for managing building construction, renovation and safety monitoring, including operational queries and data analytics.

MySQL Relational Databases Data Analysis

Business research and analysis

Innovatec S.p.A.

Conducted an economic and business analysis of Innovatec S.p.A., documenting the underlying data and analytical methodology.
